DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

- In claim 9, lines 2 and 3, change "bottom wall for he base" to --bottom wall of the base--.
- In claim 10, lines 2 and 3, change "a plurality of deformable post" to --a plurality of deformable posts--.

These changes were made to eliminate the typographical errors.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claim 1 recites a method for assembly an antenna body onto a plastic base comprising the steps of forming the plastic with a plurality of posts, punching a plurality of pinholes on the antenna body, conjoining the plastic base and the antenna body to align the posts with the pinholes, and thermal deforming the posts to engage edges of the pinholes.

Claim 8 recites an antenna assembly comprising an antenna stamped and formed from a sheet metal, wherein the antenna has a planar bottom with at least one side extending upwardly from an edge of the bottom, an insulating base including a planar bottom wall covering the bottom of the antenna and having at least one side wall

Art Unit: 2821

extending from an edge of the bottom wall and covering the side of the antenna, thereby the base substantially located at and compliantly and protectively covering the exterior side of the antenna, and wherein interengaging attachment occurs between the antenna and the base.

Claim 11 recites an antenna assembly comprising an antenna stamped and formed from a sheet metal, wherein the antenna has a planar bottom with at least one side extending upwardly from an edge of the bottom, an insulating base including a planar bottom wall covering the bottom of the antenna and having at least one side wall extending from an edge of the bottom wall and covering the side of the antenna, thereby the base substantially located at and compliantly and protectively covering the exterior side of the antenna, wherein the antenna defines a cutout around a corner between the bottom and the side thereof with a feeder sheet extending from an edge of the cutout, and the base having a retaining projection received in the cutout and compliantly covered the feeder sheet.

None of the prior arts shows or suggests the antenna assembly and method for assembly the antenna body onto the plastic base.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
